Assignment 0501 Feedback

Jonathan I. Piatos

DJcbopstix13 / jpiatos13@gmail.com

1a — One can never issue too many commands :) (+)

1b — You transcribed your activity accurately and completely. (+)

2e — Your byte-level navigation is sufficiently correct with appropriate commentary to demonstrate an understanding of the data structure. Ideally though, it would have been good for you to provide more explicit calculations (e.g., “this directory entry points to inode i , which resides in address a because $1800 + 80(i - 1) = a$ ”) because in some cases, it is easy to just jump to conclusions because a data block has recognizable data, without knowing how to determine that data block based on directory and inode information. Explicitly stated calculations would put these doubts to rest. (|)

4d — You were able to use the information presented to find your way around the file system. (+)

4e — Commit frequency and messages are appropriate to the work done. (+)

4f — Submitted on time, revised a few days later. (+)
